If you turn off the light and turn it on again after 0-1.5 seconds, it will reset and become a static red light. No matter what color state it was in before, it will become red.

If you turn off the light, wait for 2-5 seconds and turn it on again, you will switch the functional state. There are 14 working states in total, 7 static states and 7 dynamic states,

If you turn off the light and wait 6 seconds before turning it on, it will have a memory function and remember the last working colors.
